EXPERIENCE

Software Engineer

April 2024 – Present

Associate Software Engineer

March 2022 – April 2024

Illumia

Albany, NY

- Contributed to a platform **modernization initiative** to migrate from a monolithic architecture toward independent services, establishing foundational engineering practices including **Maven** build standardization and automated testing.
- Migrated multiple Java projects to **Maven**, standardizing dependency management, build configuration, and project structure across the team.
- Pioneered unit testing adoption across the codebase, configuring **JUnit** for Java backend services and **Jest** for frontend, with both suites integrated into the **Maven** build pipeline.
- Designed and developed RESTful APIs using **Java**, **JAX-RS (Jersey)**, and **Jackson**, implementing service layers, JSON request/response models, and business logic to ensure seamless data flow and functionality across distributed services.
- Led the development of a Reservation Management System, architecting the **Java** backend with RESTful service layers and data access objects, and integrating with frontend applications through **Vue.js** and **Quasar**.
- Engineered a cross-product orchestration layer by developing custom **GitHub Copilot Skills and Agents** to accelerate the integration of two primary platforms, utilizing **Node-RED** and custom APIs to automate complex data workflows.
- Architected the **Amazon Just Walk Out** Integration using **AWS** serverless technologies, including **API Gateway**, **EventBridge**, **Lambda**, and **Serverless RDS**.
- Maintained and updated web/mobile applications by troubleshooting and implementing enhancements or new features based on user feedback and business requirements.
- Built responsive and user-friendly front-end interfaces utilizing **HTML**, **CSS**, **JavaScript**, and modern JavaScript frameworks.
- Adhered to best practices in code documentation, version control (**Subversion**), and code reviews to ensure code quality and maintainability.

Cloud/Web Developer

May 2021 – December 2021

Ventur

Troy, NY

- Orchestrated the deployment and management of cloud infrastructure on **AWS** and **DigitalOcean** platforms.
- Configured **DNS records** and **firewalls** for DigitalOcean instances, ensuring secure and efficient operations.
- Engineered a highly scalable cross-platform native app using **Capacitor** and **Nuxt.js** frameworks.
- Integrated **Firebase Cloud Messaging** to enable real-time messaging for seamless user communication.
- Leveraged **Google Maps API** to add map functionality, autocomplete search, and polyline plotting.
- Developed robust **REST API** code using **ParseJS** for efficient object storage, user authentication, and live queries.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML/CSS, SQL

Frameworks/Runtimes: JAX-RS (Jersey), Jackson, React, Node.js, Vue.js, Express.js, Bootstrap

Developer Tools: Git, Maven, Node-RED, Docker, Subversion, AWS, DigitalOcean

Databases/Libraries: Postgres, SQL Server, MongoDB, Pandas, NumPy, Matplotlib, JUnit, Jest

AI & Automation: GitHub Copilot (Custom Skills & Agents)

EDUCATION

Georgia Institute of Technology

Atlanta, GA

Masters in Artificial Intelligence; GPA: 3.5/4.0

August 2022 – Present

Rensselaer Polytechnic Institute

Troy, NY

Bachelors in Computer Science; GPA: 3.48/4.0

August 2017 – May 2021
